

Page And Text Formatting With CSS Web Site Development

Create a hyperlink gallery with the following specifications:

1. The heading of the page should use an H1 tag that is reformatted with a font color of #0000FF.
2. Create the following links:
 - a. www.kirupa.com
 - b. www.htmlgoodies.com
 - c. www.kyfbia.org
 - d. www.fbla.org
 - e. www.harrodsburgatc.org
3. Using CSS, format the page to appear as follows.
 - a. Unvisited links –
 - i. family - Arial
 - ii. color - #000099
 - iii. style – small caps, underlined and italicized
 - b. Visited links –
 - i. family – Arial
 - ii. color - #0066FF
 - iii. style – small caps, underlined, NO italicized
 - c. Text –
 - i. family – Arial
 - ii. indent – 36 pixels
 - iii. color - #000066
 - d. Margin/Background
 - i. top margin – 10 points
 - ii. background color - #66CCFF
 - iii. background image – image of your choice, saved in the same directory as your page. The width of the image should be no wider than 600 px, (edit in Fireworks if necessary). There should be NO repeat and the background should be fixed.

When finished:

- place your name in the <TITLE> tags.
- preview the page in your browser and print.
- print the code in Dreamweaver.
- Staple and turn in.
